Your experience into a sellable offer

Use this workbook with Chapters 4-6 (book pp. 84-174). Save the PDF locally before typing; print a copy if you prefer handwriting.

The route through this workbook

Page	Decision	Book
2	Collect concrete career wins	91-93
3	Name the judgment people trusted	94-96
4	Turn skills into outcomes	96-100
5	Choose three client problems	101-110
6	Test one niche against evidence	111-137
7	Design one paid starting offer	138-158
8	Define a simple service menu	158-174

A useful rule

Write what you know from experience. Mark unverified buyer beliefs as assumptions. Ask real prospects about those assumptions before treating a high score as market proof.

Your current industry or community

The outcome you want from the next four weeks

Your career wins

Chapter 4, pp. 91-93. Specific stories are useful even when exact financial results are unavailable.

Win 1: situation, your action, and what improved

Win 2: situation, your action, and what improved

Win 3: situation, your action, and what improved

What did colleagues repeatedly ask you to handle?

What you notice before others do

Chapter 4, pp. 94-96. These answers can become diagnostic questions, checklists, and quality standards.

Early warning signs you catch

Questions you ask before recommending action

Common mistakes you prevent

Trade-offs you know how to weigh

Your standards for work that is ready to deliver

Translate your expertise

Chapter 4, pp. 96-100. Describe a result a buyer can recognize; avoid making a guarantee you have not validated.

A specific skill backed by a career win

Because I know how to do this, I can help a business achieve ...

I can help a business avoid ...

I can help a business improve ...

Evidence that makes these claims credible (story, reference, baseline)

PROBLEM SELECTION

Shortlist of three

Chapter 4, pp. 101-110. Score credibility, buyer urgency, AI delivery potential, and access to decision makers from 1 (low) to 5 (high).

Candidate problem	Cred.	Urg.	AI fit	Access	Total /20
1. _____	—	—	—	—	—
2. _____	—	—	—	—	—
3. _____	—	—	—	—	—

Scores are a comparison aid. The buyer still needs to confirm the pain, budget, and willingness to act.

Problem 1: who has it, how often, and measurable consequence

Problem 2: who has it, how often, and measurable consequence

Problem 3: who has it, how often, and measurable consequence

High-stakes data, legal, medical, financial or personnel risk? What oversight is needed?

Evidence before commitment

Chapter 5, pp. 111-137. Record observed facts separately from AI-generated research and assumptions.

Buyer, region or network, and reachable decision maker

Recurring problem and its consequence in the buyer's words

Firsthand evidence: observations, conversations, source and date

Evidence of capacity and willingness to pay; what is still unknown?

Two questions to ask three actual buyers

Decision: go, refine, or reject. What new evidence would change it?

A paid first step

Chapter 6, pp. 138-158. Start with a bounded assessment or defined project and one observable measure.

I help [specific buyer] with [specific costly problem]

Current state, target state, and how improvement will be measured

What I will deliver; quantity and delivery date

Client inputs, access, and approvals required

Where AI helps and where I verify and decide

Explicit exclusions and revision limit

One page of offers

Chapter 6, pp. 154-174. Use the Income, Pricing & Capacity Planner to check the economics before publishing prices.

Entry assessment: buyer outcome, exact deliverables, cadence, access and fee

Defined implementation: buyer outcome, exact deliverables, cadence, access and fee

Ongoing retainer: buyer outcome, exact deliverables, cadence, access and fee

When a client should move to the next offer or request a separately priced change

Who will you ask to discuss this offer, and when?
