

How to use the five files

A reader guide to the two PDF workbooks and two Excel planners that accompany The AI Income Second Act over 50.

File	Use it when	Result
Expertise to Offer Workbook (PDF)	Weeks 1-3	A tested niche and bounded offer
Income, Pricing & Capacity Planner (Excel)	Week 3 and monthly	Prices that fit the income and hours you choose
30-Day Client Launch Workbook (PDF)	Every launch week	Discovery notes, message drafts and actions
Prospect & Follow-Up Tracker (Excel)	Week 4 onward	Dated next actions and a visible pipeline

Recommended order

1. Complete the Expertise to Offer pages in order. Choose three problems, then validate one with real people. 2. Enter your own target and hours in the pricing planner. 3. Write a bounded starting offer. 4. Follow the launch workbook week by week, using the prospect tracker for every contact. 5. Review actual income, booked work and hours each month.

The PDF worksheets have typeable fields. Save a copy before entering answers and check that your PDF viewer preserves them. You can also print them. In Excel, blue cells are editable inputs and formulas calculate the outputs.

The first two weeks

The book deliberately starts with professional judgment and buyer evidence rather than software choices.

Week 1 - identify what you can credibly sell

Use Expertise to Offer pp. 2-5 to capture three career wins, warning signs you recognize, outcomes you can influence, and three candidate problems. The four-factor shortlist score compares your ideas; it is not proof of demand. Record the selected idea on the launch workbook's Week 1 page.

Week 2 - validate what a buyer actually experiences

Use Expertise to Offer p. 6 and the launch workbook's discovery and conversation pages. Speak with reachable buyers or informed contacts. Record their wording, current workaround, cost of the problem, and what would make a change worthwhile. Source and date each important claim. Choose go, refine, or reject after hearing evidence.

If a conversation contradicts your idea

Revise the buyer, the problem, or the offer. Keep the original note so you can see why your decision changed. Do not have an AI system invent the interview evidence or contact details.

Pricing without hidden assumptions

The book uses a before-tax income floor on p. 161 and an after-tax example on p. 312. This planner lets you state which amount you mean.

Set up the pricing planner

On the Plan tab enter the personal monthly amount you want after an illustrative tax reserve, monthly business overhead, the reserve rate you choose, hours available each week, the share of time you can deliver to clients, and a buffer for unused capacity. Enter the monthly delivery hours and fee for each offer on the Tiers tab.

The planner assumes the reserve is a percentage of revenue: $\text{required revenue} = (\text{target personal income} + \text{overhead}) / (1 - \text{reserve rate})$. It then rounds up the number of clients needed. That model is a planning aid, not a tax estimate. Ask a tax professional which rate and basis fit your circumstances. It also assumes all chosen clients pay their stated fee for the month; check partial months, gaps and collection timing separately.

Read two constraints together

The Tiers tab shows the client count needed to meet your target and the hours needed to serve those clients. If required hours exceed available delivery hours, change the scope, fee, target, or capacity assumptions. Do not promise an outcome or response time that relies on permanently overfilled weeks.

From conversation to paid work

The launch PDF holds your thinking and draft language. The prospect Excel file is your dated record of next actions.

Week 3 - make a bounded first offer

Complete Expertise to Offer pp. 7-8 and the launch workbook's Week 3 page. Include the buyer, measurable desired change, deliverables, exclusions, fee, due date, client inputs, approval points, and where your human review occurs. Confirm the proposed hours and fee in the pricing planner.

Week 4 - start and sustain conversations

Add one row per person on the Contacts tab. Give each a unique ID, relationship, stage, last-contact date, next-action date, and next action. The top of the sheet counts overdue and upcoming actions. Use the message examples in the launch workbook as drafts and personalize them after a real conversation. Update the row after each contact; never use an automatically calculated due date as permission to send a message.

Privacy and quality

Keep client notes and personally identifying details in a location you control. Redact confidential information before using an AI tool unless you have authorization and appropriate terms. Verify sources, numbers, and every client-facing claim. The book's operating agreement example should be reviewed by a qualified attorney before business use.
